Contents

Creation of DOCKER Image	3
Running DOCKER Package	6

Creation of DOCKER Image

Folders Needed For Docker Creation and Usage.

For Creating Docker

For Running Docker

Create a Folder ***“OUTPUT”*** Where you need to create Docker Image.

Copy SIL ENGINE Binaries, Radar Stream Decoder Binary, and Embedded Binaries to the **OUTPUT** Folder as Shown in the image.

Need to check if any existing images are present for the customer that you are creating now.

gld_jenkins_linux@HP4CE9301LK1:~$
```

Here, These are the available docker images on the pc.

To create an image it is recommended to remove the old image and generate it again.

Command to remove old/existing image – docker rmi -f “**IMAGE ID**” or **3 or 4 starting characters of IMAGE ID**.

```
gld_jenkins_linux@HP4CE9301LK1:/media/gld_jenkins_linux/DOCKER/STLA_SCALE_1$ docker images

gld_jenkins_linux@HP4CE9301LK1:/media/gld_jenkins_linux/DOCKER/STLA_SCALE_1$
```

Here, for srr_stla_scale_1_resin_i020 image id starts with eb48 So, using that for removing the existing image.

And the Image got removed.

Recommended to Remove the image file (.simg) and (.tar) files.

```
gld_jenkins_linux@HP4CE9301LK1:/media/gld_jenkins_linux/DOCKER/STLA_SCALE_1$ docker images

```

So, for creating the image need to change the versions in the version.txt file. Need to update the FW Version and Embedded SW Version.

Update the Sil_Engine_Config.xml if any changes are required. Because Config will be

After updating the version details. Need to run the “**createlImage.sh**” file for creating the docker image.

DOCKER CREATION AND USAGE

```
gld_jenkins_linux@HP4CE9301LK1:/media/gld_jenkins_linux/DOCKER/STLA_SCALE_1$ ./createImage.sh

Running DOCKER Package

Below is the command to run Docker Image - `"/GEN_LOG.sh /input/SIL_Input_Logs.txt /output/OUTPUT_DIR/"`

Logs should be present in the **"INPUT_LOGS"** Folder

Here in GEN_LOG.sh image name needs to be updated with the version numbers mentioned in the **"version.txt"**

```
#!/bin/sh
#-----CREATING CONTAINER AND EXECUTING SET OF LOG IN CONTAINER-----
#-----END OF SCRIPT-----
docker run -it -v $(pwd)/INPUT_LOGS:/input/ -v $(pwd)/:/output/ srr_stla_scale_1_resim_i020:sensor-srr_40_i020 001.000.000-apt_srr_resim 23_11_100_14 /RUN_RESIM.sh "c@" ;echo $?
```

Logs Path should be updated in the Sil_Input_Logs.txt file which is present in INPUT_LOGS Folder.

Input Logs Path should be mentioned in this format.

Upto the **"INPUT_LOGS"** folder it should be mentioned as **"/input/"** remaining can be the same.

Here Logs are present inside the **"log_test"** Folder and up to INPUT_LOGS it is mentioned as /input/.

Create a folder for Output Directory as **"OUTPUT_DIR"**.

Now run the command for Running Docker. `"/GEN_LOG.sh /input/SIL_Input_Logs.txt /output/OUTPUT_DIR/"`.

Outputs will be available in the **"OUTPUT_DIR"** Folder.
