Case: DetectionListWithValidDetections_4xSRR

Used for a simple check of detections list and number of valid detections.

Tests for multiple sensors.

Log: /net/8k3/e0fs01/irods/PLKRA-PROJECTS/F360CORE/6-Jira/DEX-1079/20200907T144509_20200907T144529_543078_LB36408_SRR_DEBUG.dvl

Case: FTCP12261ObjHasDetsAllSensors

Description:

This test verifies whether tracker is able to update an object with detections from all sensors on host, stated in

requirement FTCP-12261.

Check if one object ID is represented by detections from all sensors around host that are present by log start.

The scenario is a person walking in an almost full circle around host.

Case: FTCP13055ApproximateObjGeometry

Description:

This test verifies whether length and width are > 0 for all objects with status > 0

(F360_OBJECT_STATUS_INVALID)

in log, corresponding to testing if tracker approximates the detected and tracked object's geometry as two-dimensional rectangles, stated in FTCP-13055 requirement.

Case: FTCP10819DetectionsGroupedAsTrack

Description:

This test verifies whether tracker is able to group detections and represent them as tracks that model real entities, stated in FTCP-10819 requirement.

Test checks that there is at least one object with status = F360_OBJECT_STATUS_UPDATED that has associated

detections in log. Test starts search from beginning of log and passes when criteria is met.

Case: FTCP12263ObjTrackingRegardlessHostMotion

Tests verifies tracker requirement FTCP-12263 i.e. tracking objects regardless host motion (moving forward, stopped, moving backwards)

It is tested by checking if a specific object is being tracked all the time. When host moves forward, then is stationary and moves backward at the end
